PROJECTS

City Diary | Software Engineer | February 2022 | **Github:** github.com/HCJM/City-DiaryV2

A mobile application built with React Native. It allows users to record audio, pin it to their geolocation and upload it to firebase cloud storage. Audio may be private or public, the latter is accessible to all users.

- Pair programmed a burger menu that added a sign-out button and successfully authenticated users using Firebase Authentication
- Implemented user geolocation permissions using the Expo location library to track and display location information on our main interactive map feature
- Performed app quality assurance on Android devices, detecting and resolving bugs and oversights

Fullstack Spirits | Software Engineer | December 2021 | **Railway:** fullstackspirits.up.railway.app/

An E-commerce web application built with React. Visitors can browse and buy with or without an account. Users with accounts can see their order history. Admins are able to perform role-based actions.

- Built interactive user interfaces using React components, effectively managing state using Redux
- Designed and developed a RESTful API incorporating authentication middleware in Express routes
- Code reviewed and assigned tasks, rotating between git-master and taskmaster using SCRUM principles
